POWER MIZER® SERIES 8000 BLOWERS HEADED FOR INSTALLATION AT REFINERY

Spencer recently shipped two Power Mizer Series 8000 blowers, the largest model (performance and size) in this series of multistage cast centrifugal high-efficiency blowers. The Power Mizer Series 8000 line can meet performances up to 40,000 ICFM and 20 PSIG.

The machines shown here are destined for installation at a large US petroleum refinery and will deliver combustion air for a sulfur recovery process. A 1300 HP motor drives one of the machines; the other machine is driven by a 1350 HP steam turbine. The machines each weight approximately 37,000 pounds and are 215" long x 104" wide x 103" high.

Spencer also provided the customer with machine systems accessories including acoustical wraps, vibration monitors, expansion joints, filter-silencer with weatherhoods and check valves.
